INSTRUCTIONS FOR MEASURING WALRUS

All measurements must be made with a 1/4-inch wide flexible steel tape to the nearest one-eighth of an inch. Enter fractional figures in eighths, without reduction. Tusks **should** be removed from mounted specimens for measuring. Official measurements cannot be taken until tusks have air dried for at least 60 days after the animal was killed.

- A. Greatest spread** is measured between perpendiculars at a right angle to the center line of the skull.
- B. Tip to Tip Spread** is measured between tips of tusks.
- C. Entire Length of Loose Tusk** is measured over outer curve from a point in line with the greatest projecting edge of the base to a point in line with tip.
- D-1. Circumference of Base** is measured at a right angle to axis of tusk. **Do not** follow irregular edge of tusk; the line of measurement must be entirely on tusk material.
- D-2-3-4. Divide length** of longer tusk by four. Starting at base, mark **both** tusks at these quarters (even though the other tusk is shorter) and measure circumferences at these marks.
